

Convenient and flexible **access authorisation** with the **Hotel Security System** by Gretsch-Unitas

Features

- Timeless design
- Mortice lock with panic function and door furniture with integral card reader
- Concealed locking cylinder allows for emergency opening at any time
- The last 130 events are memorised and readout by means of the portable audit/programming unit.
- Software variants
 - SGA 60 for up to 10,000 rooms
 - SGA Light for up to 200 rooms

- G.U-HSS EL 100 consists of: mortise lock with panic function, door furniture with integral card reader and software package.
- The stand-alone system is powered by 5 alkaline batteries with a life time of 2 years. External wiring is not required.
- With declining battery power, each opening action is accompanied by a visual and audible signal emitted by the integral alarm system.
- Up to 10.000 identifications and 99 floors programmable per system.
- 99 Access zones programmable. Locks can be allocated to different access zones so that staff cards only have access to selected zones.
- 9 guest-related access areas; with the same card, the guest has access to his room and to various access areas such as e.g. garage, swimming pool, sauna, fitness etc.
- Several guest cards per room possible.
- In the privacy mode, the deadbolt is thrown by operating the turn knob on the inside so that access is possible with authorised guest cards only. No access for staff.
- In the free-pass mode, the lock remains released until the releasing card is used again. This mode is suitable for conference rooms to provide for passage without magnetic card during the event.
- Emergency opening via locking cylinder (concealed) is possible at any time.
- When cards are re-issued, previous authorisations of cards that might still be circulating are overwritten.
- Logging feature memorises the last 130 events which are readout by means of the portable audit/programming unit.
